

CALCIUM-SULPHATE FLOOR PANEL

CALCIUM-SULPHATE FLOOR PANEL

Floor panel made of calcium-sulphate, a non-combustible material. As standard it comes with a 0,9 mm HPL-laminate, decor P577 on top. As an option the panel can be delivered with different top coverings. Bottom side covering is either aluminium-foil or steel sheet.

The calcium-sulphate panel is made of fiber-reinforced plaster. It's most commonly used in environments where smoke development must be avoided, such as mines, tunnels or subways. The calcium sulphate panel is also suitable for areas where you have high humidity and temperature fluctuations.

Calcium-sulphate panels are delivered 600x600mm. Custom sizes are available in larger volumes.

Fire Protection:

- Building material class: A1 (DIN EN 13501-1)

Advantages with calcium-sulphate panels:

- Electrically isolated for high personal safety
- High mechanical strength

Calcium-sulphate panel cross section.

| PART. NO | NAME | DIMENSION | THICKNESS | WEIGHT |
|----------|------------------------|------------|-----------|---------|
